

# Emerald® Fungicide

## Dollar Spot Has Never Seen Anything Like It.

And neither have you. **Emerald** is a different class of fungicide chemistry for dollar spot control. The active ingredient, boscalid, attacks pathogens that cause dollar spot in a unique and highly effective way.

**Emerald** inhibits a system called complex II in the mitochondria of fungal cells. By depriving the fungal cells of energy, **Emerald** disrupts fungal growth and development, halting disease development. Both the mode and site of action of **Emerald** differ from any other fungicides used to control dollar spot, which is why **Emerald** can effectively control pathogens that have developed resistance to other fungicides. In other words, it works.

## Where To Use Emerald.

Research shows that **Emerald** provides excellent dollar spot control in every region of the country, including yours. And **Emerald** controls dollar spot in most major turf species, including:

- >> Creeping Bentgrass
- >> Colonial Bentgrass
- >> Perennial Ryegrass
- >> Annual Ryegrass
- >> Kentucky Bluegrass
- >> Common Bermudagrass
- >> Hybrid Bermudagrass
- >> Annual Bluegrass
- >> St. Augustinegrass
- >> Tall Fescue
- >> Bahiagrass
- >> Zoysiagrass
- >> Centipedegrass

## How To Apply Emerald.

Because it is a different class of fungicide chemistry for dollar spot control, **Emerald** can serve as a valuable resistance-management tool. As with all fungicide chemistries, however, **Emerald** should be applied as part of a rotation. For additional disease control, **Emerald** can be tank-mixed with other fungicides.

To achieve optimal results, make no more than two successive applications of **Emerald**. For specific application rates and instructions, consult the product label.
